(57) Abstract :  
ANALYSIS OF GLYCEMIC VARIABILITY WITH INSULIN GLARGINE VERSUS DETEMIR IN HOSPITALISED PATIENTS OF DIABETES USING MACHINE LEARNING TECHNIQUES A method for analysis of glycemic variability with insulin glargine versus detemir in hospitalized patients of diabetes using machine learning technique. The methods comprise insulin detemir-glycorate, metacresol-glycorate and phenol-glycorate are mixed and stirred to obtain mixed solution, purifying adopts ion exchange resin analysis method to carry out, and insulin detemir sample reaction liquid is 10ml, crude product purity 70%, wherein the concentration of compound (a) is in the range of 13 - 40 µg/ml, treatment with insulin glargine and metformin, determine whether the stored glycemic data was obtained meets a predetermined minimum period of time and determine a glycemic variation level using the glycemic variation matrix when the time period over which the stored glycemic data was obtained exceeds the predetermined minimum period of time and when the stored glycemic data meets the predetermined condition based on the parameter of the glycemic variation matrix.

(37) Abstract :  
IMPLEMENTATION OF MACHINE LEARNING-BASED TECHNIQUES IN DRUG DISCOVERY FOR IDENTIFYING EFFICACIOUS FORMULATIONS A method for implementation of Machine Learning-based techniques in Drug Discovery for identifying efficacious formulations. The methods comprise a means for accessing genomics information in a database wherein said means permits computational analysis of biological relationships among the stored concepts, evaluate the matched data to define a mapping of drugs to biomarkers determined based on a first qualitative and quantitative assessment to have a first mapping score above a first threshold, the structured database comprising findings data, wherein the profile definition criterion comprises any of a combination of genes or gene products that form all or part of a disease related pathway, querying the structured database to find networks of findings within the structured database that meet the profile definition criterion and the drug discovery module comprising processing circuitry configured to provide a potential drug to disease link based on the mapping of drugs to biomarkers and the mapping of biomarkers to diseases using the biomarkers as a bridge between respective mappings.
